		Edit Server List

Click on "Use Custom Port" and enter 587, or you can leave as default port. Either one will work. Be sure that "Use Secure Sockets Layer (SSL)" is still unchecked and that your username and password are entered in. Click OK.

	-
Account Information Advanced	
Use default ports (25, 465, 587)	
O Use custom port: 587	
Use Secure Sockets Layer (SSL)	
Authentication: Password	
User Name: johnsmith	1.

Go to the Advanced tab along the top. Ensure that the Port listed is 110 and not 995, and ensure that "Use SSL" is not checked.

Click on the red button in the upper left hand corner to shut the window (being sure to click Save when it asks you) and your setup is complete!
